

# **Model: 631**

Watts: 2500 Heat Stages: 18

## **Output Voltages**

Switch			
<b>Position</b>	AB/Low	<b>BC</b> /Med	AC/High
1	1.9	2.8	4.7
2	2.1	3.1	5.2
3	2.2	3.4	5.7
4	2.5	3.7	6.2
5	2.7	4.0	6.7
6	2.9	4.3	7.2

- 1. Choose one of three secondary circuits: AB/Low, BC/Medium, AC/High
  - It is recommended first using AB/Low—switch position '1'.
- 2. Fasten the electrode holder to either terminal of the selected circuit and the ground cord to the other terminal.
  - Double electrode holders do not require a ground cord.
  - Clamp the work piece with the ground clamp to complete the circuit.
    - · Not necessary with double electrode holders.
    - It also possible to clamp or bolt the ground cord to a vise to ground the work piece while holding it.
- 4. Turn selector switch (and/or change secondary circuit) to gradually increase heat until desired result is achieved for the application.
  - For best performance keep the inside of electrode tubes clean with steel brush (part #'s: 775 & 785).
